

SEI Chemical Corrosion and Rust Preventive Powder Long-Term, Environmentally Safe Protection

4/5/2008

Los Angeles, CA - A new, water-soluble powder containing vapor corrosion inhibitors from SEI Chemical - CPT 500 Corrosion Proof Powder - provides optimal long-term (up to 5-7 years) wet or dry corrosion protection. It is suitable for protecting all ferrous and non-ferrous metals exposed to harsh environments, including high humidity and salt water.

Further, it can be used as an additive or end user product.

The proprietary CPT formulation is truly migrational. The compound is attracted to metals and the product penetrates liquids, brines and other contaminants to find metal and bond to it. The SEI Chemical product can also get to and recessed surfaces to provide protection to inaccessible areas.

Formulated without phosphates, nitrites or heavy metals, CPT-500 Corrosion Proof Powder creates a durable monomolecular inhibiting layer on metal surfaces, including aluminum. No surface preparation is ever required. The corrosion and rustproof powder is environmentally friendly, 100% biodegradable and non-toxic.

Applications are nearly unlimited and the powder can be used as an additive to standing water, water systems or water-based coating systems as well. Suggested applications include dispersing the dry powder into voids, cavities, tanks, internal surfaces of compressors, turbines and engines. Also it used as a hydro-test additive for tubing, pipes and vessels or as an additive in water blasting. Further, this versatile product can be applied to parts, components and completed assemblies during shipment and storage.
