

SEI Chemical

Anti-graffiti products

SEI Chemical has introduced *GPA-300 Graffiti Proofer*, its third generation of anti-graffiti products for industrial, DOT, municipal, building and construction, restoration, vehicular and consumer applications. SEI has licensed this novel technology to Rust-Oleum Corporation owned by RPM Corporation.

Billed as the worlds first Anti-Graffiti Aerosol Coating, the GPA-300 boasts fast cure times and strong durability as well as application ease and resistance to paint, permanent markers, stickers, graffiti or any other markings bonding to the dry film. If the coating is ever damaged, GPA-300 can be repaired by respraying the surface after relatively little preparation. This nonstick coating is water-clear, UV stable, heat-stable to more than 500 F and has extreme chemical resistance.

Exceeding ASTM performance requirements, it is a fully tested and proven nanotechnological, permanent and nonstick coating that defies graffiti on nearly any type of surface. The third-generation product can be applied as an aerosol for consumer applications.
