## **SEI Chemical**

The SMP-80 is instrumental in preventing and treating mold. The proprietary mildewcide has a pigment that prevents the growth of mold, mildew, sapstain, fungi and any microbiological life. This environmentally safe product can be applied to lumber, particle board, walls, ceilings, subfloors, ductwork, wood and drywall. SMP-80 is water-based, clear and fast drying. It is also flexible enough to resist cracking, chipping and peeling. Designed to prevent the penetration of water, SMP-80 is engineered to be applied and fight mold growth before and after installation.
