

SEI Chemical's unique line of wipes allows one to clean, disinfect, sanitize and deodorize all areas of your office, home, school, medical facility, restroom, or kitchen. Our leading-edge environmental chemical formulations have the strength to perform in even the toughest industrial applications. All of our products are biodegradable and consumer safe.

We utilize the most innovative fibers and fabrics that make up our dual sided reinforced towel. The topside of the towel has an abrasive characteristic but is non-scratching and will remove the toughest, most ground in stains. The backside is a softer, highly absorbent material that will soak up any liquid and leftover residue. The combination of a high performing towel and innovative chemistry makes our products the most effective wipes on the market.
