

Nonstick Coating Offers Graffiti Protection - Posted 4/29/08

April 29, 2008

SEI Chemical has reformulated and upgraded the two-component GPA-200 Graffiti Proofer® Anti-Stick coating into a single-component, highly durable fluoro-coating with under 20 g/L VOC that is compliant in all 50 states. According to the company, the coating's dry film has a tremendous durability, chemical resistance and an impressive slip coefficient. It can be sprayed, brushed or rolled on and dries in a few hours. The product exceeded the performance requirements of ASTM D6578 Graffiti Resistance Test and graffiti can be removed with a dry towel, pressure washer or any other household cleaners.
