

Handy Pre-Moistened Towels From SEI Chemical Quickly Rids Graffiti

11/30/2007

Los Angeles, CA - A new line of pre-moistened graffiti and paint removal towels are now available from SEI Chemical. They are offered to enable schools, companies, maintenance personnel and institutions to safely and quickly remove paint (including enamel), ink and even permanent markers from nearly any type of non-porous surface.

Safe to use and handle since the product is non-toxic, non-flammable, non-hazardous, odorless and environmentally safe, a few swipes with TWL-200 Graffiti Remover Towels effectively remove unwanted graffiti or paint.

Suggested uses include, but are not limited to, steps and seats, desks, wall tiles, trains, buses and bus kiosks, lamp posts, aluminum siding, road signs, billboards, lockers, bathroom partitions and other non-porous fixtures or surfaces.

The Graffiti Remover Towels utilize innovative fibers and fabrics, with one side containing a slightly abrasive, but non-scratching surface to remove the toughest, most ground-in or unsightly stains. The other side features a softer,

highly absorbent material that soaks up any liquid and leftover residue. They are claimed to be the most effective wipes of this type on the market.

The proprietary technology used by SEI Chemical blends high-performing, environmentally friendly chemicals that incorporate commonly known flowering shrub ingredients found throughout North America. The pre-moistened towels do not require gloves or safety gear for use.

New TWL-200 Graffiti Remover Towels comprise one of many wipe or towel cleaning products from SEI Chemical. Also available are multi-purpose cleaning wipes, anti-static wipes, hand sanitizing wipes and restroom cleaning wipes. Specific products in the SEI Chemical towelette line are not offered for sale in California.
